

Our long history of working closely with our customers has yielded many innovative new ideas. By relentlessly pursuing solutions for the marketplace, TCP has developed several significant innovations. Several of our “firsts” include: Subminiature thermocouple connectors, high pressure wave rings, multi-point thermocouples and color coded ceramic connectors. TCP also designed and patented the exclusive “Knife Edge” design which is used in our “Tube-Temp” thermocouple. The Tube-Temp is the most accurate measurement device for fired heater and industrial boiler tubes on the market.
